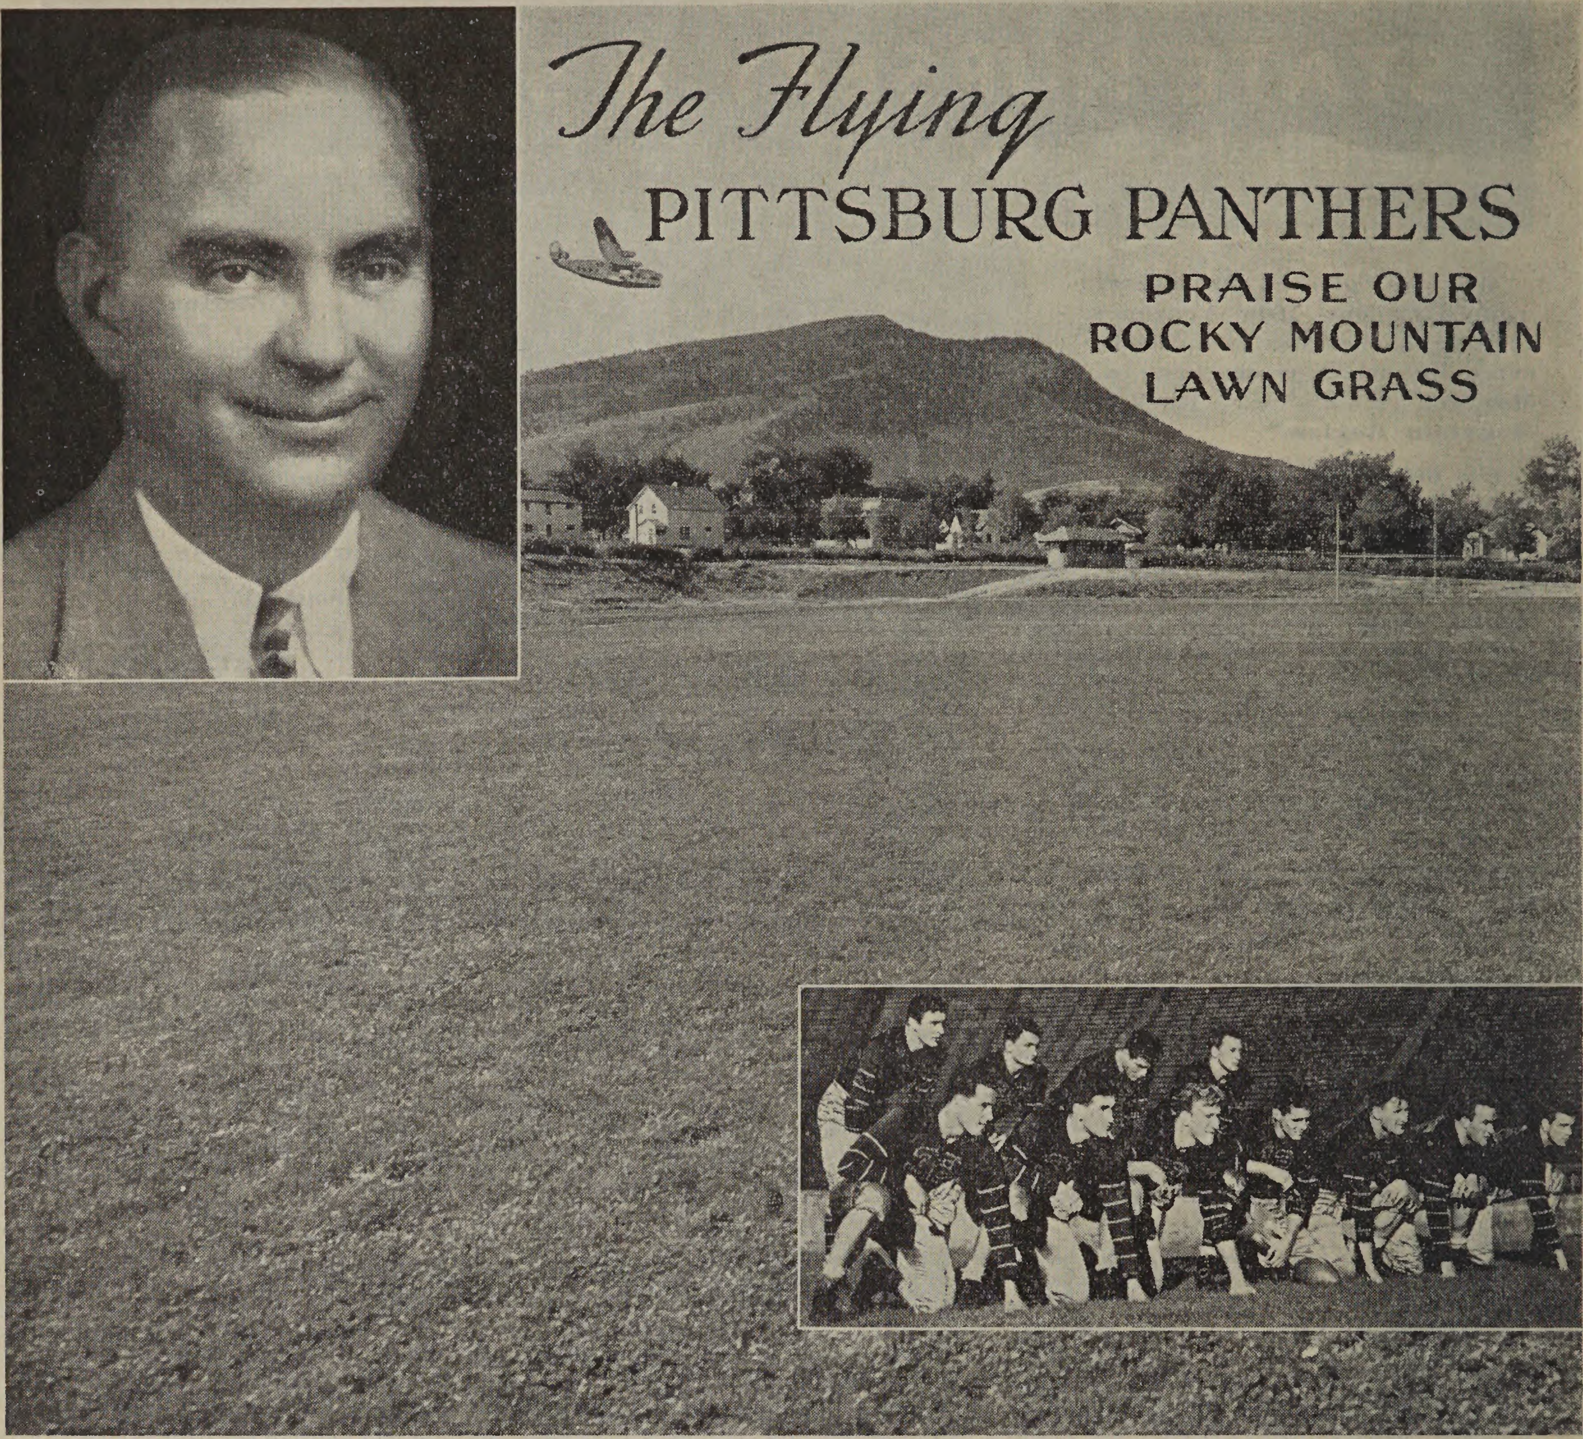
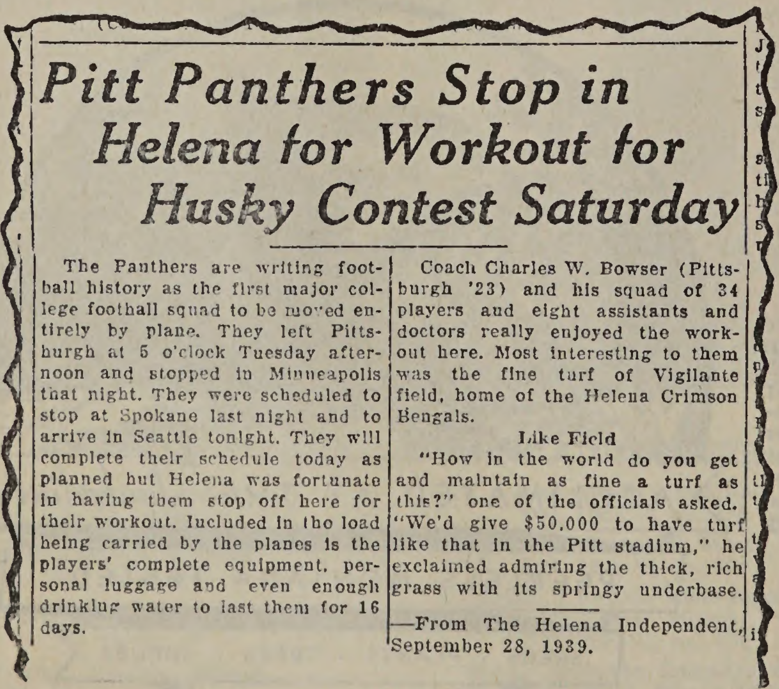
The Flying PITTSBURG PANTHERS

PRAISE OUR ROCKY MOUNTAIN LAWN GRASS



Upper left shows Head Football Coach Charles W. Bowser of the University of Pittsburgh and the first team of the Panthers lined up on the ball, lower right. The field is Vigilante Stadium of the Helena High School seeded with our Famous Rocky Mountain Lawn grass seed. Note their Flying Pullman over Mount Helena in the background.



Pitt Panthers Stop in Helena for Workout for Husky Contest Saturday

The Panthers are writing football history as the first major college football squad to be moved entirely by plane. They left Pittsburgh at 5 o'clock Tuesday afternoon and stopped in Minneapolis that night. They were scheduled to stop at Spokane last night and to arrive in Seattle tonight. They will complete their schedule today as planned but Helena was fortunate in having them stop off here for their workout. Included in the load being carried by the planes is the players' complete equipment, personal luggage and even enough drinking water to last them for 16 days.

Coach Charles W. Bowser (Pittsburgh '23) and his squad of 34 players and eight assistants and doctors really enjoyed the workout here. Most interesting to them was the fine turf of Vigilante field, home of the Helena Crimson Bengals.

Like Field

"How in the world do you get and maintain as fine a turf as this?" one of the officials asked. "We'd give $50,000 to have turf like that in the Pitt stadium," he exclaimed admiring the thick, rich grass with its springy underbase.

NOVELTIES AND OTHER RARE FLOWERS

All-America Selections

MORNING GLORY

Scarlett O'Hara

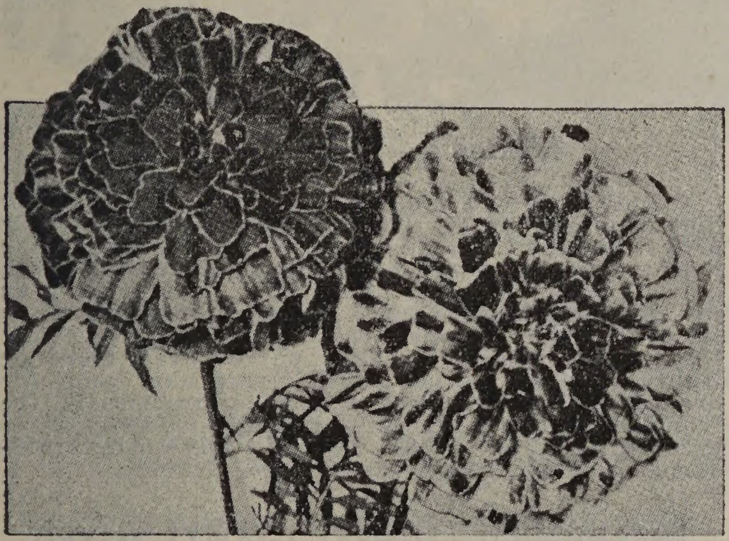
The only Gold Medal winner in two years.

This Morning Glory is entirely distinct from any other on the market. It is early bloomer, with a new vivid rich, dark wine red flowers, three and one-half inches across, and blooms until frost and stays open longer than any other variety. Blooms are found open even late in the afternoons, even in the warmest weather. A wonderful flower that will be in great demand this year. **Pkt., 15c; ¼-oz., $1.00; ½-oz.,** mand this year. This seed has a very hard seed coat. It is advisable to take a file or knife and chip seed coat for best results. **Pkt., 15c; ¼-oz., $1.00; ½-oz., $1.75.**

PHLOX

Gigantea Salmon Glory

For years we have been working to procure a good salmon Phlox. We now take pleasure in offering Salmon Glory. The individual florets are gigantic for Phlox, measuring from 1¼ to 1½ inches in diameter. The color is a pure salmon-pink with a distinct creamy-white eye. This combination with its clear, clean, crisp appearance, makes one of the most beautiful color combinations we have ever seen. Salmon Glory is one of the outstanding novelties of the year, if not the best. Hardy Annual. **Pkt., 25c; 2 pkts. 40c.**

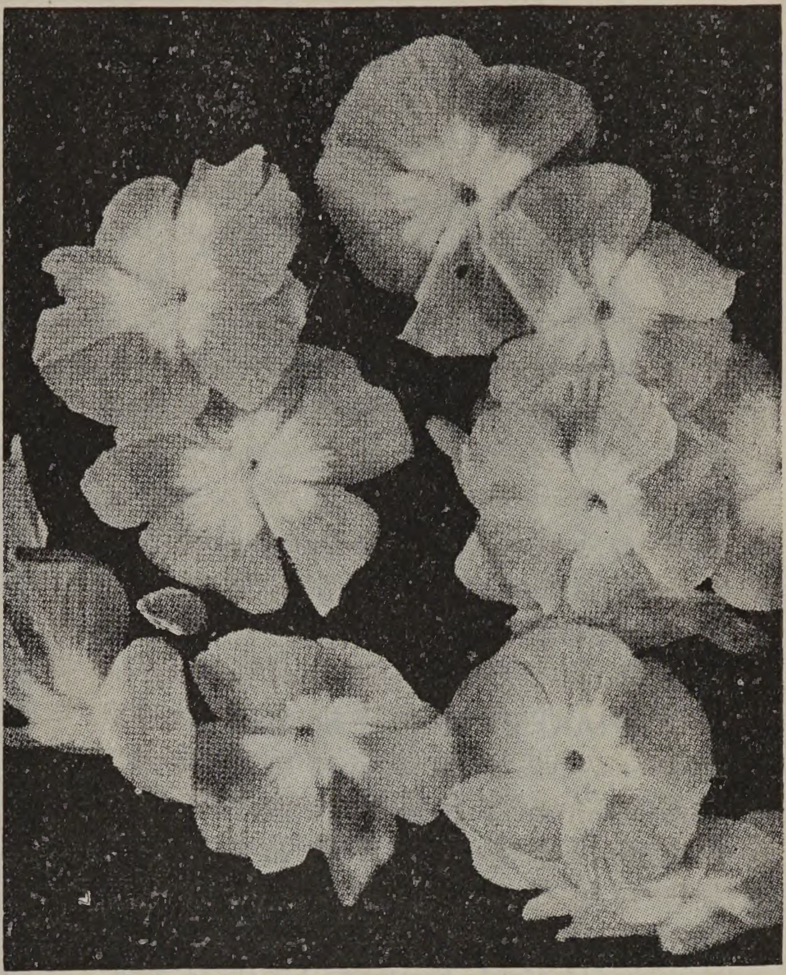


MARIGOLD
The New Red and Gold Hybrids

SCABIOSA

Imperial Giant Blue Moon

The flowers are entirely different from the old varieties of Scabiosa. The flowers are composed entirely of broad, heavy, wavy petals. In other words, the flowers are fully double and are extremely large and deep, 2 3/4 inches across and 2 inches deep. The color is a rich, deep Lavender Blue. Blue Moon is ideal for cutting because of the stem length, fully 27 inches and especially because the large, beautifully shaped flowers are such a lucious shade of deep lavender blue, so hard to find in annual flowers. **Pkt., 25c; 2 pkts. 40c.**



Phlox Salmon Glory

MARIGOLD

The Amazing New Red and Gold Hybrids

Large extremely double flowers, 2½ to 3 inches across, nearly three times the size of the largest double French Marigolds. The earliest of all Marigolds. The loveliest colored and most outstanding. In addition to the solid red with a brilliance never before seen in Marigolds, there are delightful combinations of red and gold, varying in color according to season and in different flowers on the same plant at the same time from almost pure golden yellow to bright rich mahogany scarlet. Continuous blooming until frozen. The faintly fragrant flowers last two to three weeks either on the plants or in cut bouquets. Plants 1½ feet tall, 2 feet across—a real novelty. **Pkt., 10c; Large Pkt., 25c.**

The newest development in Marigold. Beautify your garden with these novelties and specialties.

NEW FLOWER SEED NOVELTIES

WE OFFER a wonderful list of beautiful new novelties. They will add new beauty, new colors to your garden. You will enjoy watching the development of some flowers you have never seen before. Select now the varieties you want and order promptly before the supply is exhausted.

SHAKESPEARE'S PANSIES

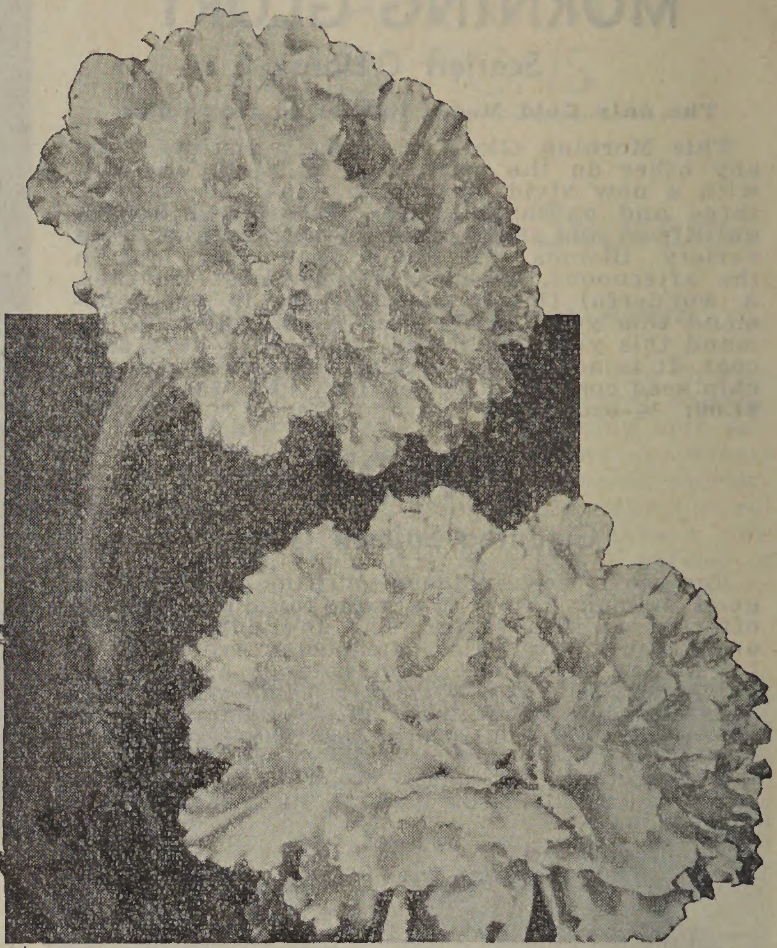
These are simple quaint little Pansies suitable for any location in the garden, also splendid for rock gardens.

Its form of habit and time of flowering is very similar to the Viola. Easily grown, dependable and full of blooms all through the summer until hard frost. Lovely in beds, rockeries and edgings. The Shakespeare Pansies were first discovered growing almost wild near Stratford, England. All those who saw them in flower last year were delighted with the dainty flowers. Really beautiful. **Pkt., 25c; 2 pkts. for 40c.**

Calendula—Orange Shaggy

In Calendulas "Shaggy" is probably the most distinct. The closely set, irregularly placed, long narrow petals are beautifully fringed or laciniated, giving the flowers the brilled or shaggy appearance of some Chrysanthemums. The large, flat, rich orange flowers shade slightly towards the medium closed center, the two-tone coloring being quite effective. Flowers are freely borne on long stems.

We feel sure "Orange Shaggy" will prove a welcome addition to the Calendula class either as a garden plant or as a cut flower. **Pkt., 10c; ¼-oz., 25c; ½-oz., 40c.**



Marigold—Yellow Supreme

Visualize, if you can, a large, fluffy, well-rounded bloom of delicately mild honey fragrance, with broad, loose, frilled petals of a rich, creamy lemon-yellow color, and you have a fair conception of the new "Yellow Supreme" Marigold. You'll truly enjoy its dazzling beauty. Unsurpassed as a cut flower. Holds decided freshness fully a week to 10 days. In water it takes on an even more delightful color. Plants are vigorous and free branching with foliage which is practically free from that objectionable Marigold odor. For a real thrill grow it this year. You will have a delightful surprise. **Pkt., 10c; ⅛-oz., 25c; ¼-oz., 40c.**

MARIGOLD—SUNSET GIANTS MIXED

The flowers are the largest known in the Marigold group, 5 to 7½ inches in diameter, the great profusion of flowers makes the showiest spot in the garden. But most remarkable, instead of the usual Marigold odor these flowers have a definitely sweet fragrance. The flowers are loosely formed, with broad petals. The Sunset Giants mixture ranging from deep orange, golden orange, light yellow, lemon yellow and primrose. Sunset Giants are wonderful for cut flowers in the home. **Pkt., 10c; ⅛-oz., 25c; ¼-oz., 40c.**

Calendula—Chrysantha or Sunshine

This valuable addition is distinctly different in flower form. It has wide petals, loosely arranged, incurved at center and reflexed at edges, somewhat like a Chrysanthemum. Flowers four inches across are clear buttercup yellow on long stems for cutting, about 30 inches tall. **Pkt., 10c; ¼-oz., 30c; ½-oz., 50c.**

SEMESAN

Place a little Semesan with seeds in a jar and shake vigorously; bacteria and fungus adhering to the seeds will be killed. **⅛-oz., Pkt. 10c; 2 ozs., 35c.**

NEW SWEET PEAS

Three Beautiful Varieties

LIFE

Is a new Scarlet Cerise Sweet Pea that is different to all other varieties. Life is the brightest and most pleasing of all because of the salmon shading which permeates the color. The name was suggested by the brilliance and sparkle of the coloring. Life does not fade or burn in the strongest sunshine. A strong grower and extremely free flowering. The flowers are bold on long, strong stems. Experts say LIFE is a wonderful SWEET PEA. Pkt., 15c; ½-oz., 25c; oz., 40c.

BRIDAL VEIL

"THE FIRST REAL WHITE SWEET PEA"

This is rather a startling statement but when compared with all other White Sweet Peas, "Bridal Veil" stands out sharply and clearly. It is a pure-clear white of stately magnificence. Bridal Veil is a black seeded white, so is less liable to rot. One is immediately impressed because the giant flowers are so beautifully frilled and graceful. Many of the flowers are duplexed or ruffled and five handsome flowers to each stem is not unusual. Pkt., 15c; ½-oz., 25c; oz., 40c.

Lady MacBeth

Lady MacBeth is a new and distinct color. It is a dazzling spinel red with golden salmon shading which makes this variety outstanding. The flower is massive and beautifully waved, nicely spread wings and will not sunburn. A strong vigorous grower, producing long stems with four and five mammoth flowers. **Pkt., 10c; ½-oz., 20c; oz., 30c.**

Crony. An exhibition Sweet Pea of first rank, large flowers on long stems, tinted a soft golden salmon. CRONY is a very strong grower and ideal for the home garden. CRONY received the Award of Merit at the Scottish Sweet Pea Trials. **Pkt. (about 30 seeds), 25c.**

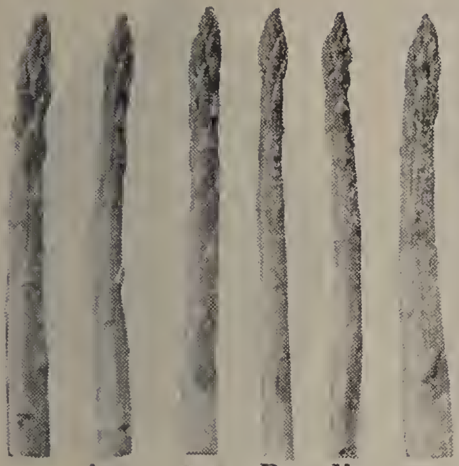
VEGETABLE NOVELTIES

ASPARAGUS—PARADISE



Asparagus—Paradise

New, Sensational, Matures 1 Year Earlier, Exceptional Quality

This new Sensational Early Maturing Variety produces a normal crop one year earlier than any other variety. Those who have seen this asparagus growing have been amazed to see the straight, crisp, large stalks that were produced from seed planted only TWO YEARS BEFORE. An exceptionally strong, vigorous producer. Some growers say it produces twice the crop of ordinary asparagus. Only six to eight stalks needed to make a pound. This variety is rust resistant, has an unusually pleasant milder flavor than ordinary asparagus and is preferred by those who taste it. Another distinct advantage is because it retains its fresh flavor. Because it brings returns one year earlier than other varieties and because of its great size, large crop and fine, mild flavor, this NEW VARIETY will quickly supercede all others. A new, better variety that will take the country by storm. An excellent variety for home gardens and market gardeners. **Pkt., 25c; ½ oz., 60c; 1 oz., $1.00; ¼ lb., $3.00.**

1 oz. to 50 feet of drill—5 lbs. to the acre

Asparagus

Sow early in the Spring in drills 2 inches deep and 12 inches apart if to be cultivated by hand. When the plants are one or two years old transplant to rows 5 feet apart, and 18 inches apart in the row. Cover the soil 4 to 5 inches deep with well rotted manure and disc well — then plow as deep as possible and harrow. Turn furrows 5 feet apart, about 6 inches deep. Place plants in rows about 18 inches apart, with roots well spread out. Turn a light furrow back over them and level by cross harrowing.

(2 lbs. to 100 feet in drill, or 150 hills; 120 lbs. to the acre, in drills)

For garden, a succession of sowing can be made from the first week in May until the middle of June. Sow in rows 18 to 24 inches apart and cover from 1 to 2 inches deep, but not more. Keep the pods picked and the vines well watered and the Beans will continue bearing much longer.

THE FOUR BEST MANGELS FOR STOCK FEEDING

Root crops are a great necessity for all kinds of stock, also chickens. Root feeding gives tissue building substance to the body, and acts as a tonic, keeping the digestive organs in a healthy condition. Root crops should be regularly fed to all stock. Results will show in appearance, also in increased weight, and will enrich and increase the milk. The ground should be thoroughly prepared, and made firm and mellow. Sow in April and May in drills 2 to 3 feet apart. When 4 to 5 inches high thin to 12 to 15 inches apart.

Mammoth Long Red—This variety produces the largest yield of any kind of Mangel. The quality of the roots for feeding is high. The roots grow very large and keep well. They are quite long, light red in color and grow well out of the ground so are easily harvested. **Pkt., 5c; ¼-lb., 20c; 1 lb., 55c; 5 lbs., $2.50; 10 lbs., $4.50.**

Danish Sludstrup—Is considered the best of all Mangels. In color it is reddish-yellow. It contains the largest per cent of nutriment found in any sort. It is very hardy, grows well above the ground and is easily pulled. **Pkt., 5c; ¼-lb., 20c; 1 lb., 55c; 5 lbs., $2.50; 10 lbs., $4.50.**

Golden Tankard—A distinct variety, particularly valuable on account of its richness in saccharine matter, and highly prized by dairymen for its milk-producing qualities. The flesh, which is of a distinct deep yellow, is very sweet and tender. The large roots areo val in shape, and therefore will pull easier. 90 days. **Pkt., 5c; ¼-lb., 20c; 1 lb., 55c; 5 lbs., $2.50; 10 lbs.. $4.50.**

Yellow Globe—An especially good variety to grow if one has a limited supply of water; a great favorite for dairymen, making a wonderful increase in milk; easy to pull; tops are small. 85 days. **Pkt., 5c; ¼-lb., 25c; 1 lb.. 65c; 5 lbs., $2.60; 10 lbs., $4.70.**

SWEET CORN

THE SEVEN BEST VARIETIES OF SWEET CORN FOR MONTANA AND THE NORTHWEST

One pound for 100 hills or 150 to 200 feet of drill; 15 pounds to acre; 1 pound is a little more than a pint; 2 pounds a little more than a quart.

Sweet Corn is very sensitive to frost and should not be planted until danger from freezing is past or about the middle of May in Montana. A rich, warm, good ordinary soil will raise excellent Sweet Corn, if it is deeply and thoroughly worked before planting. If planted in rows, make the rows three feet apart and 12 to 16 inches apart in the row; cover one inch deep with fine soil firmly pressed down. If planted in hills, make the hills three feet apart each way, and plant four to six kernels to the hill. Hoe frequently and when six inches high cut off all the suckers so as to leave three or four plants to the hill; do not let the plants overcrowd. Give fre-quent and thorough but shallow cultivation until the tassels appear. In cooking Corn use boiling water; do not cover the vessel and do not cook more than ten minutes. "Use no salt"—a pinch of sugar will add to the natural sweetness.

EXTRA EARLY VARIETIES

Golden Gem—Earlier than any other Sweet Corn of the Golden Bantam varieties. The stalks are dwarf, 2 to 3 ears on a stalk, average ear 6 inches in length and eight rowed, kernals are quite deep, meaty, rich golden yellow, very tender and of the sweetest and most sugary flavor imaginable. The greatest advantage, however, is its extreme earliness. Very valuable to the market gardener and home gardener where late corns will not mature. 60 days. **Pkt., 5c; ½-lb., 20c; 1 lb., 35c; 2 lbs., 60c; 5 lbs., $1.25.**

S. N. & S. Co's. Golden Glory, Earliest and Hardiest Large Eared Sweet Corn in the World

Golden Glory—A Montana grown Sweet Corn of high merit; growth about 5½ feet, producing 2 or 3 ears to the stalk, and considerably larger than the average Golden Bantam. The illustration is a good average specimen of a 12 to 14-row, 8-inch ear. Sweet, creamy and tender, remaining in roasting ear stage a long time. With these qualifications this wonderful Corn can be grown to maturity wherever Golden Bantam can; we predict that it will be your first choice this season. In addition to its merits as a table Sweet Corn this variety is destined to be a popular variety on account of its extreme earliness, which is ten days to two weeks earlier than the Golden Bantam. **Price: Pkt., 10c; ½-lb., 25c; 1 lb., 40c; 2 lbs., 70c; 5 lbs., $1.50.**

Appetizing, Crisp, Cool and Refreshing

(One ounce will produce 7,000 plants. ¼-ounce to the 100 feet of row; 2 ounces to acre)

LETTUCE

EVERY GARDEN CAN GROW THIS FINEST OF HEALTH FOODS

(¼-ounce to 100 feet of drill — 3 pounds to the acre)

Culture—For the earliest lettuce sow seed of the loose leaved varieties. Sow thinly and when the young seedlings are large enough for the table they may be thinned as used. In this way space is provided for normal growth. For succession sow every two weeks.

The conditions necessary to grow good head lettuce are rich soil, plenty of moisture, and steady growth until the heads are ready to use. A check in growth from lack of nourishment or moisture usually means no heads. Seed may be sown in boxes indoors or in the hot bed and set out as soon as weather permits, or sowing may be made in the open ground as soon as soil and weather conditions are favorable. Do not cover seed more than ¼ to ½ inch deep. The plants should be thinned to 10 inches apart in the row, a light application of fertilizer such as nitrate of soda used after the plants have made some growth will be found beneficial. All our varieties of lettuce are excellent for the home garden.

Peas are quite hardy and for early crop sow as soon as the ground can be worked. Then sow in succession every two weeks until the first of August. They require moderately rich soil but not excessively rich or wet, or they will run too much to vine and will not bear heavily. The dwarf varieties can be planted in rows 12 to 18 inches apart, and the tall varieties 3 feet apart. The tall varieties should be staked by brush or tied up. By using the various classes of Peas and making several sowings of each, good Peas can be had for a long season. The pods should be kept picked; the plant will then continue to bear longer. For late sowing, use Early Dwarf varieties.

New Guinea Butter Bean

One of the Most Delicious of All Vegetables

The New Guinea Butter Bean is a wonderful vegetable. Grows to enormous size, one fruit often weighing 15 lbs., and from 3 to 5 feet long. In growth it is similar to the squash, and can be grown in the same manner or can be trellised up. It is more productive than squash and much easier to grow. The vines are always free from disease and insect pects, and stand more neglect and abuse than any other vegetable vine we know of. The fruits should be eaten when small, while the fuzzy growth is yet on. It can be cooked like squash and fried like egg plant. When cut up in small pieces and cooked with cream or fried it is most delicious. If trellised up the vines take up so little space, no garden is too small for at least two or three plants. **Pkt., 10c; 3 pkts. 25c; oz., 30c; ¼-lb., 85c.**

Our collection of Perennials, which affords such a wonderful and colorful display every Summer and Fall, is the largest and best in the Rocky Mountain region, and we are continually adding to our stock. Do not confuse our perennial plants with the many seedlings on the market offered at so-called bargain prices. Our plants are grown in pots and are ready to bloom for you, having passed at least one winter in our outdoor perennial frames. When you buy perennial plants buy the best of proven acclimated strains and varieties such as ours, for they are a permanent planting.

Our Hardy Rocky Mountain Peonies

One of Our Peony Fields

CULTURE

Peonies may be planted either in the Fall or early Spring in Montana. Dig the soil deeply and cover the eyes or new buds to a depth of not more than three inches. Too deep planting causes poor growth and prevents blooming. Their chief requirements are good, rich soil and a sunny or partly shaded location. Give a liberal supply of water during growing season. Do not disturb extensively by cultivation.
